PROFILE

Highly motivated PHP/Laravel fullstack developer with 7+ years of experience seeking challenging roles where I can contribute to innovative projects.

I focus on building high-performing, secure applications by writing well-structured, efficient code, and I stay close to the metal — Linux, Nginx, Redis — when performance demands it.

- High-performing, secure applications written in well-structured, efficient code.
- Hands-on experience with multiple payment-system integrations and PCI-conscious flows.
- Server provisioning and tuning on Linux with Nginx / Apache, Redis and queue workers.
- Test-first mindset and SOLID principles for dependable, maintainable code.
- Comfortable in Agile/Scrum teams using Jira, Trello and ClickUp.

PROFESSIONAL EXPERIENCE

Hyperspace.ai Apr. 2024 – Present

Senior Fullstack Engineer

- Building production AI-augmented web tooling alongside the core platform team.
- Owning end-to-end Laravel features: API design, queue workers, observability and frontend integration.

STACK PHP/Laravel, Vue, TypeScript, Redis, Postgres, Docker, GitHub Actions.

Lovel AI Jan. 2026 – Apr. 2026

Backend Engineer

- Implemented new product features and resolved high-impact bugs across a Hypervel-based microservices stack.
- Investigated and fixed payment-flow issues — refunds, webhook retries and idempotency edge cases — affecting live transactions.
- Improved caching strategy and Redis usage, cutting repeated database round-trips for hot read paths.
- Designed and shipped REST API endpoints consumed by internal services and the client-facing application.
- Collaborated across services communicating over a NATS message broker for low-latency event distribution.

STACK PHP/Hypervel, PostgreSQL, Redis, NATS, microservices, REST API design, payment-system integration, caching strategy.

Elite Dev Squad Nov. 2021 – Feb. 2024

Laravel Fullstack Developer

- Worked on a wide variety of projects: company-management software, APIs, online stores, web-scraping tools and dashboards.
- Optimised project performance — reduced memory usage through efficient queries, dynamic content loading and bug fixes.
- Replaced a buggy, unmaintainable legacy codebase with a fully functional, scalable Laravel application.
- Led the development of complex company-management software using a large central repository of Irish businesses.
- Designed key features including task management (with recurring jobs), document management, event management, and automated/manual time tracking with rich visualisations.
- Reviewed teammates' code carefully to maintain quality and best practices.
- Automated testing and deployment with CI/CD and GitHub Actions, cutting deploy time by 50%.

STACK PHP/Laravel, Livewire, MySQL, Postgres, Clickhouse, Redis, JavaScript, Alpine.js, jQuery, CRON job scheduling, queued jobs, external API integration, large-file handling, Microsoft files viewing integration, online payment integrations, REST API integration, unit tests, code-coverage analysis.

Code Alliance Aug. 2021 – Nov. 2021

Laravel Developer

- Built and managed CRM systems with a focus on easy-to-use dashboards and secure data management.
- Automated large-scale bank-transaction processing using efficient queued jobs and memory optimisation.

STACK PHP/Laravel, MySQL, Redis, JavaScript, CSS, bank-transaction APIs, queued jobs, optimisation, secure data management.

Aist Global Mar. 2021 – Aug. 2021

Laravel Fullstack Developer

- Contributed to an online-school platform similar to Udemy with course uploads, online meetings and student interactions.
- Added secure payment systems, created a custom quiz package and published it on Packagist.
- Created a Lottie Animation Marketplace with a friendly dashboard, REST APIs and clear documentation for front-end developers.

STACK PHP/Laravel, JavaScript, multi-tenant applications, Vue.js, jQuery, MySQL, Redis, package development, payment-system integration, front-end development, Lottie animation integration.

Brain Fors Nov. 2018 – Mar. 2021

Laravel Developer

- Developed and launched a high-engagement e-sports platform for gamers, attracting hundreds of active users on release.
- Integrated external APIs (Riot, Valve) for real-time match results, statistics, player positions and ELO-based tournament organisation.
- Implemented robust security measures to ensure data integrity and user privacy.
- Built real-time chat functionality to enhance communication and engagement among gamers.
- Contributed to additional REST APIs for mobile applications and online-shopping platforms.

STACK PHP/Laravel, MySQL, Redis, JavaScript, Vue.js, jQuery, Pusher.js, REST API development, external API integrations, real-time communication protocols, data visualisation, security best practices.

TECHNICAL SKILLS

Frontend	HTML 5 · CSS 3 · JavaScript · Vue.js · Alpine.js · Bootstrap
Backend	PHP · Laravel · Livewire · Filament · Django
Data & cache	MySQL · PostgreSQL · Redis
DevOps & infra	Docker · Git · Linux
Other	Python

EDUCATION

- 1999 – 2009** Gyumri Oyunjyan secondary school
- 2009 – 2012** Gyumri State Technical College (technic)
- 2016 – 2017** Gyumri Technology Center (web developer)
